

Driving Business VALUE Through INNOVATION and PROCESS Optimisation

UPGRADES >

In an increasingly competitive and changing market environment, to effectively meet business objectives, organizations need a flexible IT strategy including frequent upgrades of their IT applications. To make the most of the advantages of technology innovation, a functional and technical system health check will help organisations to objectively evaluate the considerations needed to plan and execute a successful upgrade or cloud migration/integration journey.

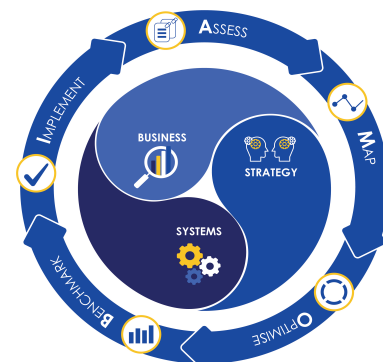

APPROACH >

Why VIP Apps Consulting?

At VIP Apps Consulting we understand that successful IT journeys require a holistic business understanding and a systematic approach. We will help your organization build a business case that will improve the performance of your business processes, implementing IT solutions that are flexible and scalable as the business grows, reaching your goals with minimal business disruption and reduced cost, risk and time.

AMOBİ Methodology

Our unique AMOBİ methodology reduces complexity by assessing your business and system strategy and objectives, identifying the key pain points and enabling a comprehensive approach which includes analysing your current processes and identifying opportunities for simplification and improvement by aligning the technology solution with the business drivers. The benefits of our approach far outweigh the investment, offering an objective model for decision-making and involving key stakeholders through the project lifecycle, with total focus on business outcomes from the initiation of the IT upgrade/migration project, to the final measurement of the business value created.

Typical considerations:

- Are you using the optimal Oracle technology to meet your business needs?
- What are the drivers that trigger the need for an upgrade?
- Which are the critical areas and complexities?
- How do we maximize the return on investment and lower TCO?
- How can we secure minimal business disruption during the project?
- Will it lead to business process improvements?
- Will the future platform and processes provide the flexibility and agility to embrace technology innovation and cloud based platforms as business needs change?
