Consulting Strategy

Enterprise Architecture Services

Technology innovation is shaping business with ability and flexibility to quickly respond and keep pace with changes determining business success.

Using our unique **AMOB** methodology, our enterprise architecture services provide a holistic approach that examines the finance function, business processes, people, culture and the organisation. All these factors are as critical as the technology solution selected.

From the definition to the implementation of the new architecture, our Oracle consultants support our clients with their application assessment, new solution design and process optimisation. Encompassing your organisation's capability we will work with you to facilitate the incorporation of innovative solutions like the cloud, enabling your business to adapt to the market dynamics, make faster decisions, and boost ROI.

Service Framework

Focused on ensuring that our clients achieve their innovation goals, our enterprise architecture services framework provide advice to create competitive advantages by leveraging on the technology that enables your business transformation. Our technology consulting services map out the business processes, applications, information, and infrastructure needed to deliver your business vision.

Assessment, Strategy and Roadmap Definition

Articulate the vision and architecture strategy that links the solutions with the business goals. Determine the appropriate migration path for each application, considering critical factors such as security, scalability, growth plan, high-priority business initiative, risk and regulations.

- Business case
- Governance and operating model
- Organisation readiness and design

Enterprise Architecture and Solution Deployment

New technology architecture and roadmap deliverables :

- Requirements definition
- Roadmap
- Identify dependencies
- Technical architecture and design
- Pilots
- Integrating solution with existing systems
- Migrating systems and data to support the solution
- Licensing mapping
- Network and management planning
- Testing and proof-of-concept
- Conversion
- Implementation. Execute application migrations

About us

VIP Apps Consulting is a business and technology consultancy firm specialised in the Finance and Leasing industry.

We develop, design and implement unique solutions to enable our clients to address their challenges and become high-performance businesses, creating value through innovation and process optimisation.

We operate at the intersection of technology and business, combining deep business and industry insight with the understanding of how technology and innovation impact the industry and business models.
